## Your Practice Paper - Analysis and Approaches SL for IBDP Mathematics

## 9 <br> Coordinate Geometry

$\checkmark \quad$ Consider the points $P\left(x_{1}, y_{1}\right)$ and $Q\left(x_{2}, y_{2}\right)$ on a $x-y$ plane:

1. $m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}$ : Slope of $P Q$
2. $\quad d=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}}$ : Distance between $P$ and $Q$
3. $\left(\frac{x_{1}+x_{2}}{2}, \frac{y_{1}+y_{2}}{2}\right)$ : The mid-point of $P Q$
$\checkmark \quad$ Forms of straight lines with slope $m$ and $y$-intercept $c$ :
4. $y=m x+c$ : Slope-intercept form
5. $A x+B y+C=0$ : General form
$\checkmark \quad$ Ways to find the $x$-intercept and the $y$-intercept of a line:
6. Substitute $y=0$ and make $x$ the subject to find the $x$-intercept
7. Substitute $x=0$ and make $y$ the subject to find the $y$-intercept

## 10 Trigonometry

$\checkmark \quad$ Trigonometric identities:

1. $\tan \theta \equiv \frac{\sin \theta}{\cos \theta}$
2. $\sin ^{2} \theta+\cos ^{2} \theta \equiv 1$
$\checkmark \quad$ Double angle formula:
3. $\sin 2 \theta=2 \sin \theta \cos \theta$
4. $\cos 2 \theta=2 \cos ^{2} \theta-1=1-2 \sin ^{2} \theta=\cos ^{2} \theta-\sin ^{2} \theta$
5. $\tan 2 \theta=\frac{2 \tan \theta}{1-\tan ^{2} \theta}$

## Analysis and Approaches Standard Level for IBDP Mathematics <br> Practice Paper Set 1 - Paper 1 (90 Minutes)

## Question - Answer Book

## Instructions

1. This paper consists of TWO sections: $A$ and $B$.
2. Attempt ALL questions. Write your answers in the spaces provided in this Question - Answer Book.
3. No calculator is allowed.
4. You are suggested to prepare a formula booklet of Analysis and Approaches for IBDP Mathematics when attempting the questions.
5. Supplementary answer sheets and graph papers will be supplied on request.
6. Unless otherwise specified, ALL working must be clearly shown.
7. Unless otherwise specified, numerical answers should be either EXACT or correct to 3 SIGNIFICANT FIGURES.
8. The diagrams in this paper are NOT necessarily drawn to scale.
9. Information to be read before you start the exam:

## Section A (39 marks)

1. The following Venn diagram shows the events $A$ and $B$, where $\mathrm{P}(A)=0.6$. The values in the diagram are probabilities.

(a) Find $m$.
(b) Find $n$.
(c) Find $\mathrm{P}\left(B^{\prime}\right)$.

2. (a) Show that $(2 n+1)^{2}+(2 n+3)^{2}+(2 n+5)^{2}=3\left(4 n^{2}+12 n+11\right)+2$, where $n \in \mathbb{Z}$.
(b) Hence, or otherwise, prove that the sum of the squares of any three consecutive odd numbers is greater than a multiple of 3 by 2 .

3. The graph of $f$ is given by $f(t)=a \sin b(t-c)+d, a>0, t \geq 0$.

When $t=2$, there is a maximum value of 37 , at P . When $t=11$, there is a minimum value of -5 . The graph of $f$ is strictly decreasing at $2<t<11$.
(a) (i) Show that $a=21$.
(ii) Find the exact value of $b$.
(iii) Find the value of $d$.
(iv) Write down a possible value of $c$.

The graph of $f$ is then transformed to the graph of $g$ by a horizontal stretch of scale factor 3 , followed by a translation of $\binom{17}{8}$. Let $\mathrm{P}^{\prime}$ be the image of P .
(b) Find the coordinates of $\mathrm{P}^{\prime}$.

The graph of $g$ is then transformed to the graph of $h$ by a translation of $\binom{-5}{12}$.
(c) Give a full geometric description of the transformation that maps the graph of $h$ to the graph of $f$.

## AA SL Practice Set 1 Paper 1 Solution

## Section A

1. (a) $m+0.2=0.6$
$m=0.4$
(b) $n+0.4+0.2+0.1=1$
$n=0.3$
(c) $\mathrm{P}\left(B^{\prime}\right)=0.4+0.3$
$\mathrm{P}\left(B^{\prime}\right)=0.7$
